

Ivan Seck Ali

Software Engineering | Full-Stack Development | Artificial Intelligence

1161 Royal York Road, Etobicoke, ON M9A 4B2 | (613) 252-5746 | ivan.seckali@outlook.com | linkedin.com/in/ivanseckali

Analytical | Adaptable | Solutions-Focused

PROFILE

Software Engineering Technology – Artificial Intelligence (Co-op) student with hands-on experience in full-stack development, machine learning, AI integration, and systems programming. Proficient in Python, Java, JavaScript, C#, SQL, Flask, and scikit-learn, with 8+ years of professional experience supporting SaaS and enterprise system implementations, requirements analysis, workflow design, and working with cross-functional stakeholders. Applies SDLC practices, testing and CI, UML/SRS documentation, and data-driven problem solving to design and deliver practical software solutions.

CORE QUALIFICATIONS

- Full-stack development using Python, Flask, JavaScript, HTML/CSS, Java, C#, and SQL, including API integration and database-backed applications.
- Applied machine learning experience with scikit-learn, XGBoost, Pandas, NumPy, model evaluation, imbalanced classification, and explainability techniques.
- Software design and requirements experience using SDLC practices, UML, SRS documentation, use cases, architecture models, and requirements analysis.
- Testing and development practices including pytest, JUnit, Git/GitHub, GitHub Actions, CI/CD, debugging, and version control.
- Enterprise implementation experience translating business and stakeholder requirements into technical configurations, workflows, reporting solutions, and documentation.
- Professional strengths in analytical problem solving, cross-functional collaboration, stakeholder communication, adaptability, and technical documentation.

TECHNICAL SKILLS

Languages: Python, Java, C#, JavaScript, SQL, HTML/CSS

Frameworks & Libraries: Flask, scikit-learn, XGBoost, Pandas, NumPy, Chart.js

Databases & Data: PostgreSQL, Oracle SQL, SQLite, Power BI, Advanced Excel

Development & Tools: Git, GitHub, GitHub Actions, Jira, VS Code, IntelliJ, Jupyter, Render

Software Engineering: REST APIs, SDLC, UML, SRS, CI/CD, testing, requirements analysis, systems design

SELECT PROJECTS

MiniRedis — In-Memory Key-Value Store

Aug 2026 – Present

Java, JUnit, Maven/Gradle, GitHub Actions

- Built a Redis-style in-memory key-value store with GET, SET, DELETE, TTL expiration, and custom LRU eviction using a hash map and doubly linked list for O(1) operations.
- Extended the store into a thread-safe TCP client-server service with write-ahead logging for crash recovery; added JUnit edge-case tests, GitHub Actions CI, and design documentation for eviction, expiration, concurrency, and persistence.

Fraud Detection Classifier — Machine Learning Project

Jul 2026 – Present

Python, scikit-learn, XGBoost, Pandas, Flask, Jupyter

- Built a reproducible fraud-detection pipeline on imbalanced Kaggle data (~1.7% fraud) using stratified splits, training-only SMOTE, logistic regression, Random Forest, and XGBoost.
- Evaluated precision, recall, F1, confusion matrices, and precision-recall curves; tuned thresholds, added feature-importance and SHAP explanations, and served predictions through a validated, rate-limited Flask REST API with pytest, GitHub Actions CI, a model card, and Render deployment.

PyQuest — Full-Stack AI Learning Platform

Apr 2026 – Present

Python, Flask, JavaScript, PostgreSQL, Gemini API, Chart.js

Originally a 2-person COMP225 project; sole author of the SRS and design documentation; independently extended and maintained after repository transfer.

- Authored a 52-page SRS and UML design package covering 15 functional and 10 non-functional requirements, use cases, CRC cards, and class, state, and sequence models.
- Built and independently extended a Flask/PostgreSQL learning platform with Monaco Editor, role-based access, and provider-agnostic Gemini AI hints and feedback.
- Added SQL/Chart.js learning analytics, rule-based plus AI code-quality scoring, heuristic adaptive difficulty, pytest/GitHub Actions CI, security controls, and Render deployment with guest access and seeded data.

PROFESSIONAL EXPERIENCE

Implementation Consultant (SaaS • EHS • Sustainability Analysis)

Aug 2026 – Present

EcoOnline — Toronto, ON

- Independently developing an internal Chemical Manager Inventory Accelerator using HTML, CSS, and JavaScript to address incomplete product-mapping data and implementation rework.
- Designed a dependency-free, browser-based five-step workflow with catalogue search, CSV/XLSX import matching, missing-product capture, SDS attachments, and structured CSV/ZIP exports.
- Presented the working prototype to the Director and Team Lead; currently expanding functionality and conducting internal testing ahead of pilot use.
- Configure EHS/ESG modules, workflows, data structures, and reporting requirements while documenting implementation needs through Jira, Salesforce, UML, SRS, and SOPs.

Client Advisory & Implementation Support Specialist

Oct 2023 – Aug 2026

REAL Broker Ltd — Toronto, ON

- Supported approximately 25–50 agent onboarding implementations per month, coordinating CRM configuration, MLS data validation, reporting requirements, and cross-functional onboarding activities.
- Built SQL-driven Power BI dashboards tracking call activity, lead follow-up, signed buyers, transaction progress, call recordings, and operational notes.
- Improved reporting visibility and data quality by centralizing operational information and helping teams identify data issues earlier.
- Gathered business requirements and translated them into CRM configurations, workflow changes, reporting logic, and technical documentation for implementation and operations teams.

Customer Operations Manager (Implementation & CS Ops)

2017 – 2023

SIRVA — Toronto & Ottawa, ON

- Managed 5 team leads, each overseeing teams of up to 10 consultants, across high-volume customer operations and service delivery.
- Led the rollout and configuration of Zendesk for 100+ users, supporting thousands of service-request and workflow tickets per month across client operations.
- Designed and optimized routing rules, automation, escalation workflows, and KPI reporting to reduce handoffs and accelerate issue resolution.
- Translated operational and client requirements into system configurations, SOPs, workflow standards, and process improvements used across service teams.

EDUCATION

Software Engineering Technology – Artificial Intelligence (Co-op), Advanced Diploma

2025 – Present | Expected Apr 2028

Centennial College — Toronto, ON

- Relevant Coursework: Artificial Intelligence Systems Design; Introduction to Artificial Intelligence; Software Requirements Engineering; Java Programming; Database Concepts (SQL); Unix/Linux Operating Systems

SELECTED CERTIFICATIONS

IBM: Fundamentals of AI | Python 101 for Data Science | SQL & Relational Databases 101 | Prompt Engineering for Everyone
